ABSTRACT: IBM's $395 Current personal information management system is a
Windows-based program that provides appointment calendars, telephone
dialers, address lists, form-letter generators, **databases** , and a simple
hypertext system. Its features are broad but tend to be simplistic. The

program organizes data in 'categories' broken down into individual fields
...

...reports, lists, books, calendars, Gantt charts or connection diagrams.
'Field types' let users create customized categories such as the contents
of a form letter. Data ' **filters** ' provide simple **database   searching**
and **sorting** functions. Current limits categories up to 2000 items and 27
connections and includes context-sensitive help screens.

ABSTRACT: Evaluations of four educational **database** programs that range
in price from $55 to $195 are presented. The programs are effective for the
development of higher-order thinking skills. Students formulate questions
about what is contained in the data files and then **organize   search** -and-
sort   strategies to answer their questions. Students can then analyze,
interpret, and draw conclusions based on their findings. Students at the
same time develop information-management skills by practicing **database**
design and management.

...   Noted aviation historian John Morrow of the University of Georgia
scripted the 81 "articles" (slide shows and videos) that comprise the bulk
of the current **data   base** , while Synapse Technologies of Los Angeles and
Ikonic Interactive of San Francisco handled production and program
architecture under government contract. The National Air and Space...

...the "iconographic license" that pervades most documentary material. The
result is professionally manicured content with extraordinary consonance
between the textual and visual components of the **data   base** . The next
priority in the World War I treatment was to create an infinitely
expandable **data   base** with **multiple** entry points, **search   strategies**
, and tools for manipulating data -- with maximum use of off-the-shelf
software to minimize custom programming and software maintenance. After
several iterations, designers settled on DOS FoxPro 2.6 for a **data   base**
management system with Visual Basic and Video for Windows tie-ins for
program architecture and video playback. The **data   base** uses a WAIS
inverted index **search   engine** with three distinct interfaces for access.
The first and default interface is an historically oriented "Theatre of
Inquiry" with a map, time line, and subject header that parses the **data
base** in real time. The second is "Applesque" and allows search by title,
author, article content, or general index. The third interface permits
bipolar relational concept browsing. For example, the user could search the
 data   base using the concepts of morality and chivalry as they relate to
the article on the "Ace as Hero" and find related material in articles on
...

...the highly subjective and labor-intensive process of manually assigning
concepts to each article and parametrically "weighting" them on a relative
scale. "Airpower's" relational **data   base** is equipped with a full array
of informational and manipulative tools. Articles are supported by a
glossary that explains technical aviation terms, while a click...

...hand, are sourced by caption and archival location. Additionally, photos
and film travel with "media notes" that reflect the insights of project
archivists. Users can **record** their own insights via a "notepad" function
and "import" these observations into the shared **data   base** . Import and
assembly capability is one of many features that distinguishes Airpower.
The **data   base** is designed for expansion through a combination of
internal cutting and pasting, and importing external digitized material.
All media and text can be marked and...

...designers recognized creation as the highest form of understanding and devoted considerable resources to developing flexible assembly and import mechanisms to make Airpower a living **data base** . Life, of course, brings its own set of problems. At issue is the administrative mechanism for distinguishing private from shared **data bases** , particularly in the context of network computing environments. Less problematic, but equally stunning in potential, is Airpower's bilingual capability. Given the ascendancy of France...Force Academy. The latter is particularly helpful because the Academy's Department of History teaches a course on the first air war, and the electronic **data base** is an integral part of a syllabus that includes traditional textbooks and lectures as well. Students presently taking the course are not only required to perform research in the Airpower **data base** , but they must assemble photo essays and multimedia presentations as a part of their graded work. The Academy setting begs a larger question that haunts...

...the public through commercial venues. The market could possibly support two versions. The first should appeal to aviation enthusiasts. It will include the rich historical **data base** and a flight simulation package that permits users to fly and fight in the airplanes and campaigns they've researched. The second version would target the educational market and emphasize the ability to assemble material from within the **data base** and import new material with fresh interpretation. In any event, Airpower users will discover a unique synthesis of media, technology, and scholarship. Seldom do we...

Sep, 1995

...   retrieved to total items retrieved, recall is harder to estimate
because it involves the ratio of relevant items retrieved to total relevant
items in the **database** , which is impossible to know. Lancaster has
suggested estimating the total number of relevant items by having several
users perform parallel searches (i.e., use **different   search   strategies**
), then combining the total number of relevant items retrieved to represent
the number of relevant items in the **database** .28 While this will not
disclose indexing failures in the **database** , it can highlight the
usefulness of **different   search   strategies** .
     Summary
     To date, research on title keyword searches has typically focused on
comparisons of title keyword searches with subject or subject keyword
searches. Book descriptions...have implications in several areas. First,
more systems can be designed to support these strategies. Second, users can
be instructed on the relative merits of **different   strategies** , either
formally or through help screens. Third, retrieval systems could be
designed to default to certain strategies under some conditions or to rank
the output...

...increase search success without increasing user effort. If FirstSearch
ranked output of keyword searches by the proximity of the terms to each
other in the **record** , users may not have to learn these strategies at all.
It is hoped that the results of this study will help build a framework in
which to view all keyword **search   strategies** .

ABSTRACT: Business and industry management researchers are finding that
locating case studies in **data   bases** can be a difficult task both in
identifying which articles contain case studies and in mastering the
variety of **search   strategies** necessary for different **data   bases** .
Review of case studies is essential in business management planning and
development and both the online services and the **data   base** providers
have been negligent in identifying business case studies for a searcher
even though they have many thousands available.
     ...   also databases for more general, popular literature, databases such
as Magazine Index or Newspaper & Periodical Abstracts, or even Books In
Print.
     Needless to say, different **databases** require **different   search
strategies** . A few go out of their way to help you find case studies. Look
at UMI's files, for example. ABI/INFORM recognized the importance...

...with the descriptor term, Case Studies, makes a very effective search
strategy. This descriptor is not used in UMI's Business Dateline file,
although one **record** did manage to slip past quality control with Case
Studies appended as a descriptor term. In Business Dateline you must use
the more general descriptors...

College students as end user searchers: one university's experience.
Wozny, Lucy Anne
RQ, v28, n1, p54(8)
Fall, 1988

...   a reasonable number of citations only to combine the search set
with another keyword, causing a smaller final set.

Students who searched more than two **databases** retrieved a median of thirty-four documents; students who searched one or two **databases** retrieved a median of fourteen documents. From an analysis of search transcripts, it appears that those students who searched a large number of **databases** flipped from **database** to **database** until they found one that used the same vocabulary that they used to describe their topics. This is unlike the searching expert, who would choose a **database** for its content matter and then try out **different** **search** **strategies** or would use a controlled vocabulary to perform a successful search.

Searching Techniques Used by Students

Three specific searching techniques used by students are worth...

ABSTRACT: The Internet requires **different**   **search**   **strategies** than
commercial online services. Successful searching of the Internet depends on
techniques such as going straight to the information source, guessing URLs,
and developing strategies for when to use subject directories and **search**
 engines   . If the information needed is of the type likely to be made
available on the Web, then it is just a matter of determining who...
...TEXT: to search than commercial online services, although the absence of
a per minute charge (for most of us) relieves one pressure. However, the
Internet requires **different**   **search**   **strategies** than commercial online
services. The pearl building approach of finding one relevant citation in a
controlled vocabulary index and then finding more based on its subject
headings does not work well in Internet **databases** that lack controlled
vocabulary. Instead, successful searching of the Internet depends on
techniques such as going straight to the information source, guessing URLs,
and developing strategies for when to use subject directories and **search**
 engines .

STRAIGHT TO THE SOURCE

Understanding the production of information content and the methods of its
dissemination are useful skills in identifying likely sources for specific
... and newspapers offer a known pool of content providers and categorized
or keyword search access to the most current articles.

SEARCH ENGINE STRATEGIES

In   this   series   of   search   strategies , the large
automatically-generated Web **databases** known as **search**   **engines** are
saved for very specific searches. Because the likes of HotBot and Excite
include over 50 million pages in their **databases** , each indexed in full
text, searches on these tools usually result in a very large number of

hits. While the **search** **engines** are the first place to look for many
novices, the other strategies and the directories provide quicker access to
a relevant source than the **search** **engines** . Since these Web **databases**
attempt to find and index as many pages as possible, and their automated
spiders index pages far below the top-level page, these are extremely large
databases that have millions of hits on common words.

For that reason, these large Web indexes are most effective for searches
with very unusual keywords, for...

Plenty of food for thought
Cleary, Ann
Information World Review n120 PP: 62 Dec 1996
ISSN: 0950-9879 JRNL CODE: IWR

...ABSTRACT: Safety Directorate of the Ministry of Agriculture, Fisheries
and Food that deals with food safety and consumer protection, is reviewed.
Food Safety Plus contains 2 **databases** – an archive with the full text of
suspended or obsolete legislation, and a current disc offering material
dating from the early 1990s. The disc is updated every 3 months. Food
Safety Plus uses the Windows-based retrieval software WinSPIRS. All key
words used in the **database** can be browsed in the index. Boolean operators
and limit fields make searching flexible and easy. Retrieval is also quick.
Search histories are displayed clearly at the top of each screen, and
different **search** **strategies** can be combined.

Local System and Bibliographic Utility Data Exchange: Current Approaches
Bishoff, Liz
Information Technology & Libraries v10n2 PP: 105-108 Jun 1991
ISSN: 0730-9295 JRNL CODE: JLA

...ABSTRACT: apply to Online Computer Library Center Inc. (OCLC) and the
Research Libraries Group Inc. (RLG). Libraries have been transferring

bibliographic information from providers of bibliographic **records** since the 1960s. Today, there are several approaches to online transfer. Utilization of the electronic file transfer facilities may solve the problems of timely transfer of **records** . RLG has developed electronic file transfer and is working with a library on implementation, while OCLC is pursuing an electronic file transfer pilot project. With the use of multiple sources of catalog information, library staff members are faced with **multiple search strategies** and user interfaces. Implementation on both the local system and the bibliographic utilities of the Open Systems Interconnection and Z39.50 standards is necessary to...

Company Directories Online: Trinet and Dun's
Ojala, Marydee
Online v12n5 PP: 85-90 Sep 1988
ISSN: 0146-5422 JRNL CODE: ONL

ABSTRACT: A company directory **database** is useful for business searches to check company name spelling, to find out the size and location of a company, to determine if a company is under public or private ownership, and to get a quick snapshot of a company's finances and subsidiaries. One difficulty is that different **databases** , such as Trinet and Dun's Marketing, may require **different search strategies** . For example, the kinds of **records** differ between Trinet's own Establishment and Company files. Dun's Marketing has made a valuable improvement by consolidating its Electronic Yellow Pages into one file, with 8.5 million **records** . If an "everything" search is being done, then both Dun's and Trinet's files should be used. Dun's files include executive names while Trinet files do not. Dun's Market Identifiers have 2.5 million **records** on companies with 10 or more employees and more than $1 million in sales. Neither Dun's nor Trinet's files are absolutely accurate. Time...

...   users add their own favorite search engines.
     The jargon could take a bit of getting used to, but the actual process of setting up a **search** **engine** query is relatively simple. First, you create a brief organizer and give it a name. Next, you add individual search queries to the brief one at a time, choosing which **search** **engines** to hit with each query. Additional customization, including retrieval options and **additional** **search** **filters** , are also available. It's also possible to schedule background searches for a later time.
